## ImproveManager

### COSMINO's Improvement Management

READ HOW YOU CAN IMPROVE YOUR MEASURE MANAGEMENT  
EASILY WITH OUR WELL-PROVEN TOOL

Your Cosmino® ImproveManager Advantages:

- Knowledge sharing through centralized data management
- No more double handling since you work on already existing ideas
- For detailed descriptions and documentation link measures with photos, video and voice recordings
- Less administrative effort using our standard software
- Time saving: flexible application of improvement proposals from reports, audits or meetings directly at the plant facility with one mouse click

Ideas and measures for the continuous improvement are collected centralized, executed systematically with the help of the well-proven workflow and then evaluated.

Further features are:

- Escalation management: warning for overrun deadlines
- Transparent access for all authorized personnel (even across different sites) to the knowledge collected
- Automatically generated final reports
- Standardized processes or workflows according to PDCA, DMAIC or 8D

Unique is that in Cosmino® ImproveManager measures and evaluations (key figures, work places, products,...) are as closely as possible interconnected. Thus, they are described exactly, easy to retrieve and objectively evaluated.

Read more in our new [brochure](#).
